

## Response to comment on: Cilioretinal artery occlusion with paracentral acute middle maculopathy associated with COVID-19

Dear Editor,

We would like to thank the authors for their evaluation of our study. On this occasion, we realized that we had misspelled the sentence. We are sorry about that. At this moment, we are correcting our sentence as “there is no case in the literature reporting isolated CILRAO after SARS-CoV-2 infection in a young patient with no other systemic disease and no significant medical history.”

In our case, serum homocysteine level was normal (5.3  $\mu\text{mol/L}$ , normal range: 4.3–9.9  $\mu\text{mol/L}$ ), and there was no history of cannabis use. We thank the authors for the opportunity to highlight these details.

### Financial support and sponsorship

Nil.

### Conflicts of interest

There are no conflicts of interest.
